BiPAP autoSV Advanced – System One Sleep Therapy System

For patients with central or complex sleep apnea
and periodic breathing

HCPCS Code E0470 and E0471

Overview

The following information describes the Durable Medical Equipment Medicare Administrative Contractors' (DME MAC) medical policies for respiratory assist devices related to central and complex apnea and periodic breathing. Information was obtained from the DMEPOS supplier manuals and local coverage decisions from each region. This guide is for illustrative purposes only; it is not meant to be used as legal or reimbursement guidance. For specific instructions, please reference your supplier manual, or contact your DME MAC medical director or provider helpline.

General coverage guidelines

The treating physician must be one who is qualified, by virtue of experience and training in noninvasive respiratory assistance, to order and monitor the use of respiratory assist devices.

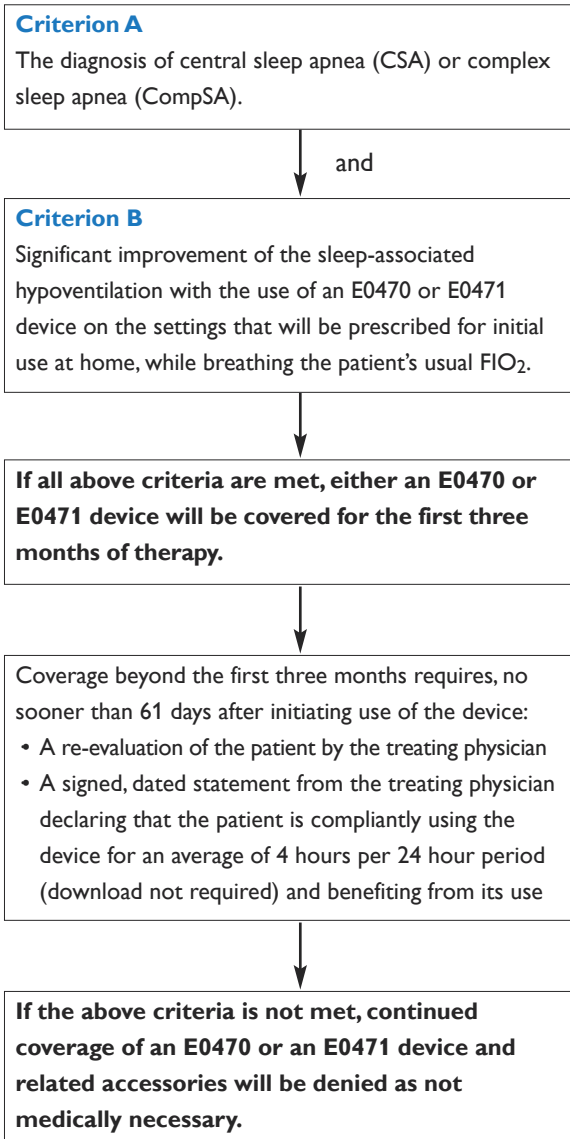

For the consideration of coverage, polysomnographic studies must be performed in a sleep study laboratory, and not in a home or in a mobile facility. The laboratory must also comply with all applicable state regulatory requirements. Arterial blood gas, sleep oximetry and polysomnographic studies may not be performed by a DME supplier. This prohibition does not extend to results of studies conducted by hospitals certified to do such tests.

If at any time the patient discontinues use of E0470 or E0471, the supplier is expected to ascertain the RAD device and discontinue billing for the equipment and related accessories and supplies.

The treating physician must fully document in the patient's medical record, the symptoms characteristic of sleep-associated hypoventilation, such as daytime hypersomnolence, excessive fatigue, morning headache, cognitive dysfunction, dyspnea, etc.

Central sleep apnea or complex sleep apnea

Note: All coverage criteria below, including those outlined in the CSA and CompSA definitions, must be met for coverage.

Central sleep apnea (CSA) is defined as:

1. An apnea hypopnea index (AHI) > 5; and
2. Central apneas/hypopneas > 50% of the total apneas/hypopneas; and
3. Central apneas or hypopneas ≥ 5 times per hour; and
4. Symptoms of either excessive sleepiness or disrupted sleep.

Complex sleep apnea (CompSA) is a form of central apnea specifically identified by the persistence or emergence of central apneas or hypopneas upon exposure to CPAP or an E0470 device when obstructive events have disappeared. These patients have predominately obstructive or mixed apneas during the diagnostic sleep study occurring at greater than or equal to five times per hour. With use of a CPAP or E0470, they show a pattern of apneas and hypopneas that meets the definition of CSA described above.

Relevant ICD-9-CM diagnosis code

ICD-9 code	Description
327.21	Primary central sleep apnea
327.22	High-altitude periodic breathing
327.27	Central sleep apnea in conditions specified elsewhere
327.29	Other organic sleep apnea
786.04	Cheyne-Stokes respiration (Central sleep apnea due to Cheyne-Stokes breathing pattern)*
There is no ICD-9 code for complex sleep apnea. Document presence of any central sleep apnea using code above.	

*BiPAP autoSV Advanced is cleared for the treatment of periodic breathing, such as Cheyne-Stokes respiration.
